

Job Posting: Controls Technician

Job Title: Controls Technician

Location: Denver, CO or remote location near a major airport

Compensation: Depending on Experience

Start Date: ASAP

Description:

EdgePower is hiring a Controls Technician to install energy management controls equipment in commercial buildings. Work includes installation of control panels, running and terminating low voltage wiring, and programming and troubleshooting lighting and HVAC controls equipment and energy monitoring hardware. Must be comfortable with a volt-meter and troubleshooting low voltage circuits, network wiring, as well as computer software configuration for controls equipment. Travel required up to 90% of the time, sometimes on short notice. This position reports to the Director of Operations.

Desired Skillset:

We are seeking someone who is resourceful, enjoys travel and on-site installation, is comfortable working with both client staff and client leadership, shows a passion for energy efficiency and renewable energy. The ideal candidate will be comfortable with and/or have experience with working around 277/480V wiring and on a scissor-lift to access ceiling-mounted systems. Computer software skills required, Linux knowledge a plus. Electrician License and/or Engineering degree are a benefit but are not required. Also, possession of or willingness to obtain a Passport is required. Most travel will be in the U.S. with occasional trips to Canada and Mexico and a possibility of overseas travel.
