

Job Requisition: Enterprise Software Developer

Job Title: Enterprise Software Developer

Location: Greater Metro Detroit, Michigan

Compensation: Salaried – Competitive Rate Depending on Experience

Start Date: ASAP

EdgePower:

EdgePower was formed to tackle the most challenging behind-the-meter energy issues for large commercial energy consumers. Our on-site and cloud-based energy management systems are deployed into nearly 500 sites throughout the US and internationally. EdgePower's current product offerings include lighting and HVAC control utilizing wired and Zigbee wireless communication, enterprise reporting and analytics of energy usage, and demand charge management services. Additionally, EdgePower is working with the Department of Energy SunShot initiative to develop demand change management products for commercial buildings with solar.

The EdgePower team is a passionate group willing to go the extra mile to improve product quality, safety, and customer experience. With a wide array of business and technical knowledge, the team is highly collaborative and leverages expertise where it exists. We're looking for self-starters that are team oriented, open to collaboration, and support a positive work environment.

Description:

EdgePower is hiring a full-stack enterprise software developer. This position will work to grow the suite of EdgePower enterprise energy management capabilities. Key tasks include expanding the front-end web interface for displaying energy data, reporting on building operations, and creating APIs to interface with local energy management controllers. Enterprise back-end database creation and management, and overall server and system administration will be a secondary priority. Full-stack experience including database experience and familiarity is a large plus. This position will report to the EdgePower Lead Software Developer.

Desired Skillset:

We are seeking someone who is resourceful and passionate about creating new software products. Desired computer software skills include Django, Angular, Python, HTML, JavaScript, Linux/OS X, and Amazon Web Services. Familiarity with Flask and/or rails is a bonus but not required.
